

Verifying DKIM and DMARC records

Verify DKIM record

To verify that a DKIM (DomainKeys Identified Mail) record is correctly configured, you can follow these steps:

Use an Online DKIM Checker: <https://easydmARC.com/tools/dkim-lookup>

- Enter your domain and check “Detect all selectors”

DKIM Record Checker

Lookup, your domain's DKIM record for a particular DKIM selector to identify possible issues and fix them.

Domain

Selector ⓘ

Detect all selectors ⓘ

[Check DKIM](#)

You should see one or more results such as:

Selector
fd

Record value: [Copy](#)

```
v=DKIM1;k=rsa;p=MIIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBCgKCAQEA55Uix6oMtlINU54us

```

Verify DMARC record

To verify that a DMARC (Domain-based Message Authentication, Reporting & Conformance) record is correctly configured, you can follow these steps:

Use an Online DMARC Checker: <https://easydmarc.com/tools/dmarc-lookup>

- Enter your domain to see if the DMARC record is valid and correctly configured.

DMARC Record Checker

</> Get an embed

Lookup your DMARC record to identify any problems and fix them.

Enter your domain name

Check DMARC

You should see a summary such as:

Record Status ⓘ Valid	EasyDMARC Reporting ⓘ Inactive	Domain Policy ⓘ Quarantine	Subdomain Policy ⓘ None
---------------------------------	--	--------------------------------------	-----------------------------------

- Record status should be VALID
- Domain Policy status should be QUARANTINE or NONE. REJECT will cause misconfigured incoming emails to get rejected.
- And one or more results such as:

DMARC Record

Value	v=DMARC1; p=quarantine; pct=100; rua=mailto:re+bbntolk3rbq@dmARC.postmarkapp.com; sp=none; aspf=r;	Copy
-------	--	------
